

About • Us!

Our objective is to widely encourage people to change the public transportation or your private car and use a bike as your main transport around the city.

We turned into a reference location to communicate and exchange ideas about the shared use of the urban space, security related issues, initiatives regarding traffic education as well as an open workshop for learning the basics on bicycle's mechanics aiming always for the rider's autonomy in the city.

As it's a space managed by volunteers offered without a cost to whomever needs support, we remind you that all the parts used are also available accordingly with public donations so in case of major repairs, you need your own which we share tools and knowledge to make your experience richer.

We won't fix it for you, we will otherwise teach you how to make it!
